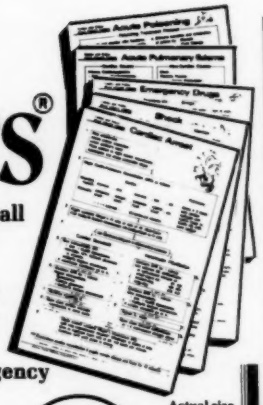
STAT CHARTS®



A set of 5 poster-size wall charts which provide immediate visible information needed by the clinician to rapidly diagnose and accurately treat emergency conditions in dogs and cats. Large, easy-to-read type.

Actual size 13 x 20 inches

$12.95 per set of 5

In emergencies, there just isn't time to look it up. Every small animal hospital needs at least one set of Stat Charts. A must for the rapid and effective care of the critically ill or injured patient. This is the same concept as the "Code Blue" and other emergency procedure charts used in human hospitals. Printed in intense black and white, they can be read from 10 feet away and have a "wipeable" finish.

Topics Covered Are:

► Cardiac Arrest

This chart provides a cardiac arrest step-wise approach which includes cardio-pulmonary resuscitation and treatments for cardiac standstill/ventricular fibrillation.

► Shock

This chart which provides essential information on shock includes the types, clinical signs, monitoring, a treatment protocol and drug dosages.

► Acute Pulmonary Edema

This chart provides essential information on acute pulmonary edema including the cardiac/non-cardiac causes, treatments and drug dosages.

► Emergency Drugs

This chart is a listing of drugs used frequently under emergency conditions and lists the emergency uses and dosages.

► Acute Poisoning

This chart provides a poisoning treatment protocol for acute poisoning and general treatment principles including specific drugs and dosages.
